Date of Acceptance: 26<sup>th</sup> May 2019)

### ABSTRACT

Enterocolitis is a bacterial poison in human .It can pass in into the tissues. Blood stream it can disturb human small intestine. It can effect serious damage if it is not dried .Questionnaire was prepared about the enterocolites. Different questions were asked in it .total 79 students join in in it 97.36% students recognize that it is a bacterial disease 3.94% students consider that it is not a bacterial disease.

**Key words;** Enterocolitis, An intestine awareness

## INTRODUCTION

Enterocolitis is a disease in human and is caused by several infections' bacteria, viruses, fungi, parasite This pollution can penetrate into the small intestine and even it can penetrate into intestinal tract in this infection sickness, intestinal pain, fever. Enterocolites that developed in the small, large intestine becomes damaged. Enterocolites affect the protozoa parasite. It can also source loss of blood flow or oxygen. This septicity first of all appears on small intestine. Though infection can occur on any part of body but mostly it affected the blood stream. If it is not frozen then it can cause serious damages. It can be cured by using antibiotics and helps to fight the infection if baby is feeling exertion in inhalation

The main purpose of the study was awareness about enterocolites its causes and impact on health.

## MATERIAL AND METHOD

A questionnaire was prepared that checked different questions about the

awareness of enterocolitis it covers the questions like is as enterocolites viral, bacterial, or metabolic disease every one of your family, families and friends have grieved from this disease? Did it shift hereditarily or by blood transfusion? How can we give it one or the other by medicine or surgery? A total of 79 students take part in it they were all students of BZU Multan.

### Statistical Analysis

It was completed by using MS excel.

## RESULTS AND DISCUSSION

Percentage of reactions given by students calculated distinctly in the table number 1.2.3 and 4 separately. 2.85% students measured it a viral disease and 97.14% said that it is not a viral disease 97.36% said that it is a bacterial disease 7.24% said that it can be transmitted from parents to progeny's 91.30% considered that it can be preserved by medicine 7.24% said that it can be preserved by Surgery

**Table no.1:** Questionnaire to awareness about etiology of Enterocolitis

| Enterocolitis is a   | Yes    | No     |
|----------------------|--------|--------|
| 1.Viral disease      | 2.85%  | 97.14% |
| 2. Bacterial disease | 97.36% | 3.94%  |
| 3.Fungal disease     | 8.97%  | 91.2%  |
| 4.Genetic disease    | 3.94%  | 96.5%  |
| 5.Metabolic disease  | 2.66%  | 97.33% |

**Table 2** Questionnaire to evaluate views about transmission of Enterocolitis

| Every suffered from enterocolites | Yes    | No     |
|-----------------------------------|--------|--------|
| 1.you                             | 2.36%  | 97.36% |
| 2.Your family member              | 2.59%  | 97.40% |
| 3.Your relative                   | 28.57% | 71.42% |
| 4.Your neighbor                   | 5.97%  | 94.20% |
| 5.Your friend                     | 6.84%  | 93.15% |

**Table 3.**questionnaire to evaluate views about transmission of enterocolitis

| Enterocolitis is transmitted by | yes    | No     |
|---------------------------------|--------|--------|
| 1.contacts of blood transfusion | 14.66% | 85.33% |
| 2.from parents to offspring     | 7.24%  | 92.75% |

**Table 4.**questionnaire to evaluate views about hope for enterocolites

| Entercolitis may be treated by | yes    | No     |
|--------------------------------|--------|--------|
| 1.medicines                    | 91.30% | 8.69%  |
| 2.sargery                      | 7.24%  | 92.75% |
| 3.no need of treatment         | 10.14% | 89.85% |

## CONCLUSION

It was concluded from the above study that most of the students know that it is a bacterial

Infection not viral.96.5% students know the enterocolites is not a genetic disease and it can to be

Transferred genetically .3.94% students have suffered from this disease.
